

WOLF-EYES

Tactical Flashlights

Raider 380

Raider 9AF

Lumens:	380 lumens
Runtime:	45 mins
Light type:	Incandescent
Levels:	100%
Length:	160mm
Body Diameter:	25.4mm
Bezel Diameter:	35mm
Weight:	184 grams w/o battery
Batteries used:	2 X LRB 150A

In the box:

- 1 x Raider body
- 1 x Fast charger
- 1 x 9.0V lamp
- 1 x 9.0V 380 lamp
- 2 x LRB 150A battery
- 1 x Gift Box

Wolf-Eyes - Tested on Humans

WOLF-EYES

Tactical Flashlights

Raider 380

Raider 9AF

The Wolf Eyes Raider 380 is a compact high intensity xenon torch with high 380 Lumen output. The Raider 380 wears a push button tactical tailcap. The Raider 380 includes a fast 3 hour charger, 2 x LRB 150A battery and matched 9.0V 380 lumen globe.

The Raider series features a bright 380 Lumen output strong enough to temporarily disorient or disrupt an individual's night vision, perfect for self defence use or as a non lethal tool for officers of the law.

As an incandescent, the Raider provides particularly good colour rendition and consequently visual depth perception in organic environments such as bushland. For this reason it is often chosen by hunters or Officers working in semi rural environments.

The light level is a similar level of light output or brighter to the standard black baton like lights used in the past by many Police Forces in Australia. The difference is Wolf Eyes Raiders are pre focussed, meaning they are always in focus irrespective of whether they are aimed 2 metres or 75 metres away. There are no annoying black holes in the beam either.

Constructed of aircraft grade aluminium which is then anodised in a non-reflective tactical black, the Raider's construction is extremely durable.

While the Raiders can use standard non rechargeable CR123A batteries like many older torch designs, they also have the ability to use the environmentally and wallet friendly Lithium Ion rechargeables, the same technology used in many mobile phones. Unlike most rechargeable batteries, Lithium Ion batteries have a very low self discharge rate, able to hold their charge for up to 10 years. The LRB 150A battery is an energy dense rechargeable battery equivalent in size to 1.5 CR123 batteries in size. It is nice to know your torch will be working when you need it.

Part of the Wolf Eyes modular system, replacement modules and optional accessories are available such as a holster, rechargeable kits, LED Tailcaps (in white, red, green, blue and UV), Cree LED Drop ins (fully regulated), Wolf Eyes Lamps, Lumens Factory high output lamps, car charger, additional batteries, filters (red, UV & Infra Red), gun tailcaps (straight & coiled) and gun mounts.
