## Rattlesnake 700

Rattlesnake M90A 13V

<b>Lumens:</b>	700 lumens
<b>Runtime:</b>	45 mins
<b>Light type:</b>	Incandescent
<b>Levels:</b>	100%
<b>Length:</b>	222mm
<b>Body Diameter:</b>	25.4mm
<b>Bezel Diameter:</b>	45mm
<b>Weight:</b>	299 grams
<b>Batteries used:</b>	3 X LRB 150A

### In the box:

- 1 x Rattlesnake body
- 1 x Charger
- 1 x 700 lumen 13V lamp
- 1 x 300 lumen 13V lamp
- 3 x LRB-150A battery
- 1 x Body extender
- 1 x Gift box

## Rattlesnake 700

Rattlesnake M90A 13V

The Rattlesnake 700 is for those whose backyard is a paddock, need to clear a warehouse or just need a lot of light, this is the torch for you. The brightest incandescent in the Wolf Eyes range, the Rattlesnake 700 is often mounted on a rifle to use as a lightweight alternative to the established heavy lights. With both good flood and throw, the Rattlesnake 13V provides a lot of light from a still relatively compact package (222mm length), using the 25.4mm body. Like all Wolf Eyes products it is made of alloy for good dissipation of the heat it is able to generate. The Rattlesnake 700 wears a push button tactical tailcap.

The Rattlesnake 700 series features a bright 700 Lumen output strong enough to temporarily disorient or disrupt an individual's night vision, perfect for self defence use or as a non lethal tool for officers of the law.

As an incandescent, the Rattlesnake provides particularly good colour rendition and consequently visual depth perception in organic environments such as bushland. For this reason it is often chosen by hunters or Officers working in semi rural environments.

The light level is a much brighter level of light output compared to the standard black baton like lights used in the past by many Police Forces in Australia. One major difference is Wolf Eyes Rattlesnakes are pre focussed, meaning they are always in focus irrespective of whether they are aimed 2 metres or 100 metres away. There are no annoying black holes in the beam either.

Constructed of aircraft grade aluminium which is then anodised in a non-reflective tactical black, the Rattlesnake's construction is extremely durable.

The Rattlesnake 700 is designed to use high power Lithium ion rechargeables, the same technology used in many mobile phones. Unlike most rechargeable batteries, Lithium Ion batteries have a very low self discharge rate, able to hold their charge for up to 10 years. The LRB 150A battery is an energy dense rechargeable battery equivalent in size to 1.5 CR123 batteries in size. It is nice to know your torch will be working when you need it.

Part of the Wolf Eyes modular system, replacement modules and optional accessories are available such as a holster, rechargeable kits, LED Tailcaps (in white, red, green, blue and UV), Cree LED Drop ins (fully regulated), Wolf Eyes Lamps, Lumens Factory high output lamps, additional batteries, filters (red, UV & Infra Red), gun tailcaps (straight & coiled) and gun mounts.
