Wolf-Eyes - Tested on Humans

You're NEVER in the dark with Wolf-Eyes

WOLF-EYES

Tactical Flashlights

Thunder 780

Thunder 780

The Thunder, a multiple quality LED torch with large output and good runtime. This is a new style of torch, only a year ago if you wanted this you had to build it yourself or have it made by a custom torch manufacturer at great expense.

The Thunder has 4 modes, high, medium, low and strobe. It uses two LRB 168A batteries and has a 25.4mm body size, so that it fits standard sight mounts, picatinny rail mounts, bicycle mounts, etc. It is built to the same high standard as all Wolf Eyes torches and takes options such as gun tailcap.
